Read the "Read Me" File

open me then upload
readme.txt
ventrino_386_patch.zip

This file passes on any info you need (like installation steps etc)

```
http://filezilla-project.org Is a FREE FTP program.

==============================
    STEP 3
==============================

Go to http://YOURDOMAIN.com/3.86_update.php
using your browser and then follow any further
instructions on the page that pops up

==============================
    STEP 4
==============================

There will be template files for you add if you choose
and this IS recommended and I'm afraid any changes you
made to your old pages will have to be done again.

Now open the "open me then upload folder"

open me then upload
readme.txt
ventrino_386_patch.zip

You should now have a lot of files and folders similar to this

backend	bb_click.php	v-i18n.php
custom	bb_show.php	v-pclzip.lib.php
data	bb_show2.php	v-setup.php
images	bnr_show.php	v-update.php
include	cell-blue.jpg	v-zipFallbackLinux.php
js_scripts	cell-grey.jpg	
manager	footer.php	
pages	index.php	
template-edits	paypal_ipn_bb.php	
3.86_update.php	showsqbansq.php	
banner_board.php	template_show.php	
bb.php	vcode.png	

Now you have them on your PC you need to use FTP to upload them to your server

Here are some FREE FTP clients but there are thousands online

Check out CoffeeCup **HERE**

Check out FileZilla **HERE**

There is a list of lots **HERE** so you can find one you like (most are free or offer trials)
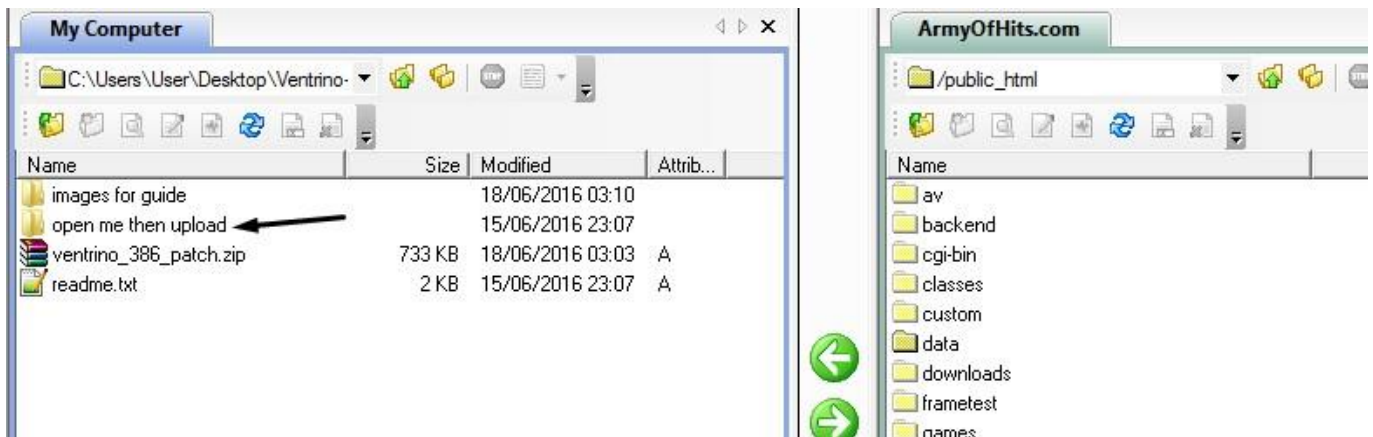

Ventrino Software

**Turning website visitors into buyers since 1994**

Once you login to your FTP client you access your server and it will look like this

Note the file structure on the left so you know you are in the correct area and select the "open me then upload", double click it to open

Now you have ""Your Computer on the Left" and "Your Website on the Right"

You'll see that they contain similar files and basically you are selecting ALL the files on the left and moving them over to your site (copying over any if prompted)

As people edit the template files we've kept them separate and you can open the template-edits folder to find any recent template changes

In this example there is a 3.86 folder so we open that too

Name	Size
3.86	

We'll find another folder called templates so we select that and move the whole thing over to our Website too

***Note if you have modified your templates folder you would open ours and move the files to the correct location (99% won't have)**

Now you need to open your browser and go you the link that was listed

In this example it was 3.86_update.php so we'll add our domain and go there

armyofhits.com/3.86_update.php

A new page will appear and it is VERY important that you read this information

It's important that you read below.

You've reached this step as you have added the main files to your
Traffic Exchange BUT there are still a few things you need to do...

Step 1

If you have not logged in to your Traffic Exchange manager section in the last few
hours please **"open a new tab"** and do so now then come back here...
This simply allows us to update a few fields so you don't have too.

Version 3.85 TO 3.86

ADDITION

Banner Board - An additional high converting source of income.
Bonus Codes - Quick way to offer free credits through codes.
Update Feature - 1 Click update from next version. **(can't wait)**
Super Affiliate - Quick On / Off options for multiple affiliate earning features.

**This section basically lets you know what is going to be installed or
if you need to do anything AFTER you have installed the files**

Banner search edit.
Moved account config to members section.
Re-added Daily Login Config to "Main" section.
Re-added ISB editor back to "Templates" section.

REMOVAL

Auto Assign % - Simply a dead feature that nobody understood.
Surfbar Anti-AutoClicker - Waste of time.
Surfbar Window Focus - Limited Browser support.

STEP 2

Now that the main files are added there may have been some template changes
and these are important BUT we don't want to copy over any of your work
(or you may have your own template folder)...

On your site you will have a "template-edits" folder which would have any of the
latest edits listed in the folder of that version Example: **template-edits**/3.86

Use FTP to move to your account and if you want to make any changes you can do
so now (most people leave as is) then simply move BACK to your site in the correct
location, 99% of the time it will be similar to what they are in already...

(basically you open 3.86 and copy over)

**And it will remind you of any template changes and prompt you to login using a
link which is VERY important as this finishes off the installation process**

TEMPLATE CHANGES

Profile.tpl - Addition of roboform affiliate On / Off

STEP 3

If you logged into your manager as per step 1 you can continue below and enjoy your
new features and look forward to our next version where we do all of the above for you :)

This finishes off the installation process and you are good to go!

I strongly recommend that you take a full back up while you are in Cpanel so you simply have a fresh start if you mess around too much with the setup... On that note,
